

Greenhouse

The town's greenhouse produces hundreds of thousands of sea oats for sale to coastal homeowners, businesses and other beach communities. Sea oats are indigenous to this region and are used for the protection of coastal sand dunes. They are capable of trapping large quantities of sand during their first growing season.

The plants are sold for .35 cents each and are available in trays of 288 plants at a cost of \$100.80. These plants are also available in gallon pots at a cost of \$5.00 per pot. The greenhouse is located at 304 Dow Road.
