FLOOD HAZARD INFORMATION MEETING-JULY 15, 2015

CAROLINA BEACH, NC – On Wednesday July 15, 2015, residents and business leaders in New Hanover County communities will be able to review and discuss the latest flood hazard and flood risk data.

Now available digitally, preliminary flood hazard information can be layered on top of the county's parcel data so property owners can better determine potential risks to their land. An open-house event will be held on Wednesday, July 15th, from 5:30 pm – 7:30 pm, at the Carolina Beach Town Council Room, located at 1121 N. Lake Park Boulevard in Carolina Beach, North Carolina.

Residents also can access the flood hazard data online at <http://fris.nc.gov/fris/>. Digital flood hazard data also can be viewed by calling the County or Municipality that your property is in or the North Carolina Floodplain Mapping Program (NCFMP) at 919-715-5711.

The July 15th public meeting provides an opportunity for residents to see the results of the revised studies and new flood hazard areas. County and municipal employees will be on hand to help residents locate particular properties from the flood hazard data and determine their level of flood risk. Representatives from the NCFMP may make a short presentation on the flood study process, how the new digital hazard data can be used to reduce future flood losses, and how the preliminary hazard data may impact flood insurance and floodplain management. Attendees also may see a demonstration of the North Carolina Flood Risk Information System. Following the presentation, state emergency management representatives will be available to answer questions about the hazard data update process, flood insurance coverage and floodplain management.

The North Carolina Floodplain Mapping Program was established in 2000 with a mandate to update flood hazard data for all 100 counties. Through a partnership with FEMA, the state was charged with creating and maintaining the Flood Insurance Study for all North Carolina

communities. Since 2003 the NCFMP has analyzed, updated and digitized the flood hazard data for all 100 counties and associated communities in North Carolina. This preliminary flood hazard data was developed based on local community requests for new flood hazard risk studies for the updated streams. Please note that only those portions of the revised streams have been updated. Therefore, some communities in the county will not have new flood hazard data, although adjacent counties may have some updates due to the seamless statewide format for the mapping program.

For more information on an individual property's flood risk, visit <http://fris.nc.gov/fris/>.
